Summary

Final-year Computer Science student at FAST NUCES Karachi with hands-on experience in AI/ML engineering, NLP, and computer vision. Built and deployed AI systems using Python, FastAPI, and deep learning, and interned as an AI engineer integrating ML models into client applications. Focused on building practical AI-driven software and growing towards AI engineering as a career.

Education

FAST National University of Computer & Emerging Sciences (FAST NUCES)

Aug 2022 – Jul 2026

BS Computer Science

Rockford Cambridge School

March 2017 – Aug 2022

O/A Levels (A & A in Computer Science)*

Experience

AI Intern

Jun 2025 – Aug 2025

TAJS SKYLINE

- Researched, prototyped, and shipped AI-driven software features alongside senior developers across active client projects.
- Integrated ML models and NLP APIs into existing applications, from model selection through to deployment.
- Evaluated emerging AI frameworks and wrote technical briefs that shaped product decisions.

Student Teaching Assistant – Data Structures

Aug 2025 – Jan 2026

FAST NUCES

- Graded assignments, projects, and quizzes for 100+ students while maintaining consistent evaluation standards.
- Supported students with algorithmic reasoning, debugging, and complexity analysis.

Section Leader (Mentor) – Stanford Code in Place

Apr 2025 – Jun 2025

- Mentored Python learners globally and led live programming sessions as part of Stanford's annual online initiative.

Leadership & Activities

Vice President – MLSA FAST KHI

Aug 2023 – Present

- Directed major technical events including Microsoft Imagine Cup, Brogramming, and HackOps.

Projects

AI-Powered Influencer Matching Platform (FYP – Ongoing)

- Designed a Multi-Head Attention Pooling network to aggregate per-post OpenCLIP embeddings into influencer-level vectors, with cosine similarity search via pgvector in PostgreSQL.
- Built the full embedding pipeline in Google Colab with Drive checkpointing and OOM-safe batch processing for large-scale data.
- Engineered a FastAPI/React backend with a business-aware NLP ranking layer, WebSocket real-time chat, and milestone payments.

Focus Sentinel

- Built a computer vision app using OpenCV and MediaPipe for real-time gaze tracking and focus monitoring.
- Integrated YOLO-based object detection to identify phone usage and trigger distraction alerts.

Four Bishops AI

- Developed a chess engine using Alpha-Beta Minimax and custom heuristics for optimized bishop endgames.

Technical Skills

Programming: Python, C++, C, HTML/CSS

AI & Data: NumPy, Pandas, OpenCV, NLP (BERT), Multimodal Embeddings (CLIP), PyTorch

Databases: PostgreSQL (pgvector), MongoDB, SQL

Frameworks & Tools: FastAPI, Git, Linux

Actively Learning: MediaPipe, YOLO, LangChain, RAG pipelines, LLMops, fine-tuning workflows

Core Skills: Algorithms & Data Structures, Machine Learning, Deep Learning
